

## Instructions for SAS Configuration to Connect to the Corporate Data Warehouse (CDW)

After you have configured an ODBC Data Source for the Corporate Data Warehouse, open SAS and create your libraries **[fill in anything in brackets]**:

```
libname [name]
odbc
dsn=[uc_cdw] (Note, this should be whatever you named the connection in your ODBC set-up)
preserve_tab_names=yes
schema=[schema name]
```

### Available Schemas (depending upon the individual user's access):

```
PERACAD
PERADDR
PERDEP
PERLAB
PERSONNEL
PERSONNEL_RV
TITLECD
```

### Example: CDW Personnel schema

```
libname UC_CDW
odbc
dsn=UC_CDW_P (Note, this should be whatever you named the connection in your ODBC configuration)
preserve_tab_names=yes
schema=PERSONNEL
```

NOTE: If you wish to connect to CDW when you start SAS, add these libname statements to your autoexec.sas program.
